

Hey guys. These are my recommendations for your science course next year.

Juniors and Seniors:

1. If you took Chem I and made an A or a B, I strongly recommend you take Chem II. It is an honors course, and it will help you when you take chemistry in college, especially since we did not get as far as we needed to in Chem I because of the virus.
2. If you took Anatomy and made an A or a B, and are planning to go to college, I recommend you take Chem I. It will be an honors course and will help prepare you for college chemistry.
3. Anatomy can also be taken at the same time with either Chemistry course.
4. If you took Biology or Honors Biology last year and made an A or B, Chem I is recommended (esp if you are planning to go to college). You can take it by itself, or take it with Anatomy.
5. If you need a 3rd science credit and do not think you will need Chemistry, Anatomy is a good option to meet this requirement

Sophomores:

6. If you took Biomedical Science last year...here are your options.
 - *If you made an A or a B, you can take Honors Biology or regular Biology.
 - **If you made less than a B, you will need to take regular Biology.
 - ***If you made an A or a B, you may also take Chem I along with Biology. This will give you room in your schedule as a Junior and/or Senior to take Chem II and Anatomy. This is the college prep route. Chem I is an honors course.

If you have any questions, feel free to message me. Have a great summer!! Mrs. Belser
